

StaffDesk

Workforce Management Platform — Feature Overview

StaffDesk is a role-based workforce management system built to run the day-to-day operations of an organization: task and project tracking, employee and department administration, leave and timesheet management, performance reviews, SLA and capacity planning, and a full audit trail for compliance. The application is built on an ASP.NET Core / PostgreSQL backend with a web frontend, and exposes a distinct experience to each role in the organization — Admin, Manager, HR Admin, Team Member, and Auditor — so that every user sees only the tools relevant to their job.

The pages that follow walk through the application screen by screen, grouped by the role that uses them: the Admin console (organization-wide setup, task and project oversight, analytics, platform and system health), the HR Admin's Performance Management workspace, the Auditor's read-only audit trail, and the Team Member's day-to-day work view. A final page shows the built-in Arabic / RTL language option available to every user.

Admin Console

The Admin role has full visibility across the organization. Each feature below is shown together with its own create, edit, and detail screens, followed by planning and analytics, platform integrations, and system health.

The Auditor's dedicated view of the security audit trail: every event is filterable by type, outcome, actor, target, date range, and source IP. Auditors alone can see full change payloads on each event; other roles have sensitive fields redacted by the API.

HR Admin — Performance Management

The HR Admin role owns the full performance-review lifecycle: running review cycles, calibrating ratings across teams, and maintaining the competency framework the whole organization is assessed against.

Performance — My Reviews

Every employee, including HR staff themselves, can load and track their own performance reviews from this tab.

Performance — Assess (Self Assessment)

A screenshot of the StaffDesk 'Performance' tab, specifically the 'Assess' section. The header and navigation bar are the same as the previous image. The 'Assess' tab is selected. Below the tabs, there is a 'Review Id' input field and a 'Load review' button. A message says 'Load a review to work on, then use the sections below.' The 'Self assessment' section has a heading 'Rate your own performance. At least 200 characters of justification are required before you can submit.' It includes a 'Rating (1-5)' dropdown set to '3' and a 'Justification' text area with the placeholder 'What did you deliver, and what was the impact?'. At the bottom right of this section are 'Save draft' and 'Submit self assessment' buttons. The 'Manager assessment' section is partially visible below.

An employee rates their own performance (1–5) and must provide at least 200 characters of justification before the self-assessment can be submitted.

Performance — Assess (Manager Assessment & Response)

The screenshot shows a dark-themed web form. The top section is titled 'Manager assessment' with a subtitle 'Manager rating and rationale for this review.' It contains a 'Rating (1-5)' input field with the value '3' and a 'Justification' text area with the placeholder 'Evidence behind the rating.' Below these are two buttons: 'Save draft' and 'Submit manager assessment'. The bottom section is split into two columns. The left column is titled 'Evidence' with a subtitle 'Attach a supporting note to the review record.' It contains an 'Evidence note' text area with the placeholder 'Link or short description' and an 'Attach evidence' button. The right column is titled 'Employee response' with a subtitle 'Reply to the assessment once it has been shared with you.' It contains a 'Response' text area and a 'Send response' button.

The reviewing manager records their own rating and evidence, can attach a supporting note, and the employee can reply once the assessment has been shared with them.

Performance — Assess (Appeals & Peer Feedback)

The screenshot shows a dark-themed web form. The top section is split into two columns. The left column is titled 'Appeal' with a subtitle 'Formally contest the outcome of this review.' It contains a 'Grounds for appeal' text area with the placeholder 'Why the outcome should be reconsidered' and a 'Raise appeal' button. The right column is titled 'Peer nominations' with a subtitle 'Nominate colleagues to give peer feedback on this review.' It contains a 'Nominee employee ids' text area with the placeholder 'Comma separated, e.g. 4, 7, 12' and a 'Nominate peers' button. The bottom section is titled 'Peer feedback' with a subtitle 'Submit feedback using the token issued with a peer nomination.' It contains a 'Peer token' input field, a 'Rating (1-5)' input field with the value '3', and a 'Justification' text area. Below these is a 'Submit peer feedback' button.

Employees can formally appeal a review outcome, nominate colleagues to give peer feedback, and peers submit their ratings using a token issued for that nomination.

Performance Competency library loaded.

My reviews Assess Cycle (HR) Calibration Goals **Competencies**

```
{
  "ratingScale": [
    {
      "value": 1,
      "label": "Not yet meeting",
      "descriptor": "Consistently below the expectations set for this level; a documented support plan is required."
    },
    {
      "value": 2,
      "label": "Partially meeting",
      "descriptor": "Meets some expectations; specific, named gaps remain."
    },
    {
      "value": 3,
      "label": "Meeting",
      "descriptor": "Reliably meets the expectations of the level. This is the expected outcome for a competent employee, not a disappointment."
    },
    {
      "value": 4,
      "label": "Exceeding",
      "descriptor": "Consistently beyond the level's expectations, with evidence."
    }
  ]
}
```

The organization's competency library and 1–5 rating scale, with a written descriptor for what each rating level means, used consistently across all reviews.

Team Member

The Member role sees a focused, personal view of the system — their own assigned work and its status — rather than the organization-wide administration tools.

Dashboard — My Work

A team member's landing page: a quick summary of tasks assigned to them, overdue items, work due this week, and items in review, followed by their personal task list.

My Work — Task Row Example

An individual task row as seen on a manager's or colleague's work list, showing priority, SLA state (e.g. At Risk), and reopen/rework history at a glance.

My Work — Task Row Example (SLA Breached)

A second example task row, this time flagged as SLA Breached — the same at-a-glance status system used throughout the Work views.

Localization

StaffDesk ships with built-in Arabic language support, including a full right-to-left layout, available to every role from their own Profile settings.

Profile — Language & Appearance

Every user can switch the entire interface between English and Arabic from their Profile page. Choosing Arabic mirrors the whole layout right-to-left and translates the navigation and labels, alongside an independent light/dark appearance toggle.
